Art Unit No. 2671

## LISTING OF CLAIMS

(1)   (currently amended) A method for displaying program messages by an executable program executing on a GUI environment as text file character strings provided by said a computer program, comprising the steps of:

(a)   providing an executable program;

(b)   providing a at least one text file including descriptions of text file character strings and being openable with said executable program; and

(c)   executing said executable program; (d) whereby said executable program performs the steps of:

automatically opening the a text file; and

retrieving said text file character strings from the executable program so that program messages can be generated as text file character strings; and

JP920000027                        -2-

Serial No. 09/755,308
Art Unit No. 2671

~~(e)~~ displaying program messages as <u>one of</u> text file
~~the~~ character strings included in the opened text file
<u>and executable program character strings</u>.

(2)   (currently amended) The method of Claim 1 wherein said
text file further includes a search key and wherein
said opening<u>, retrieving,</u> and displaying comprise the
steps of:

searching said search key;

retrieving the text file character strings in said text
file when said search key <u>"enabled"</u> ~~enabled~~ is detected
in said searching;

displaying program messages in the retrieved text file
character strings; and

displaying program messages in character strings
embedded in said executable program when the search key
<u>"disabled"</u> ~~disabled~~ is detected in said searching.

(3)   (canceled)

(4)   (canceled)

(5)   (currently amended) A method for creating a computer
      program enabling program messages to be displayed on
      GUI environment as text file character strings,
      including the steps of:

      describing a code for providing said GUI environment;

      describing a code for an executable program to perform
      the steps of automatically opening a text file
      including said text file character strings and
      retrieving said text file character strings so that
      program messages can be generated as text file
      character strings; and

      describing a code for displaying program message as one
      of executable program character strings and text file
      character strings as described in said opened text
      file.

(6)    (currently amended) A method for creating a computer
       program of Claim 5 further comprising describing a
       default character string and wherein said describing a
       code for said executable program ~~opening a text file~~
       and said describing a code for displaying program
       messages as character strings comprise the steps of:

       describing a code for searching a search key of a text
       file including a selected text file character string;
       and

       describing a code for displaying said selected text
       file character string when said search key to be
       enabled is detected and for displaying said default
       character string when said search key of said text file
       to be disabled is detected.

(7)    (currently amended) A recording medium for recording a
       computer program enabling program messages to be
       displayed on GUI environment as text file character

strings and enabling a computer to read said recorded

computer program, including:

a code for providing said GUI environment;

a code for an executable program to automatically open

opening a text file including said text file character

strings and retrieve said text file character strings;

and

a code for displaying program message as one of

executable program character strings and text file said

character strings as described in said opened text

file.

(8)     (currently amended) The recording medium for recording

a computer program of Claim 7 further comprising a code

for providing a default character string and wherein

said code for said executable program to open a text

file opening comprises a code for searching a search

key of a text file including a selected text file

character string, and wherein said code for displaying comprises a code for displaying said text file selected character string when said search key to be enabled is detected and a code for displaying said default character string when said search key to be disabled is detected.

(9)    (currently amended) A method for creating a computer program including control-related character strings, including the steps of;

(a) creating a text file describing said control-related text file character strings; and

(b) creating a program file describing a code for <u>an executable program to</u> automatically <u>open</u> ~~opening~~ said text file to generate control related program messages as said text file character strings.

(10) (previously presented) The method for creating a computer program of Claim 9 wherein said creating a text file comprises creating a text file including a

Serial No. 09/755,308
Art Unit No. 2671

selected control-related text file character string and
a search key; and, wherein said creating a program file
comprises creating a program file including a default
character string and a code for automatically shifting
control to said selected control-related text file
character string when said search key to be enabled is
detected and giving control to said default character
string when said search key to be disabled is detected.

(11) (previously presented) A program storage device
readable by machine tangibly embodying a program of
instructions executable by the machine to perform a
method to generate at least one control-related text
file character string related to computer control, said
method including the steps of:

automatically opening a text file including said at
least one control-related text file character string to
generate control related program messages as said text
file character strings; and

JP920000027                    -8-

Serial No. 09/755,308
Art Unit No. 2671

using said at least one character string described in said opened text file to control said computer.

(12) (previously presented) The program storage device of Claim 11 further comprising a default character string and wherein said opening a text file comprises searching a search key of a text file including a selected control-related text file character string; and wherein said using at least one character string comprises using said selected control-related text file character string to control said computer when said search key to be enabled is detected and using said default character string to control said computer when said search key to be disabled is detected.
